

CONNECT Conferences
SUSTAINABLE MEETING SOLUTIONS BY LANGHAM

CONNECT is Langham Hospitality Group's corporate sustainability programme, which focuses on the four key areas of environment, community, colleagues and governance, to promote and encourage sustainability through all aspects of business.

Langham has taken one step further to also strive for excellence in sustainable event management and operations by implementing **CONNECT Conferences** – a derivative of CONNECT, which provides sustainable meeting solutions.

CONNECTING WITH LANGHAM HOSPITALITY GROUP

Since 1865, Langham has been hosting legendary events. Today, Langham has elevated the meeting experience to create events which are not only memorable, but also sustainable.

Launched across select properties, **CONNECT Conferences** offers planners the option to select sustainable meeting solutions which offset the environmental and social impact from their event.

Flexible options, from simply serving filtered water rather than bottled to creating banquet menus, which use locally grown organic ingredients, allows planners to create sustainable events tailored to their budget and preferences.

Langham holds the internationally accredited EarthCheck certification across the majority of its properties, making it one of the more sustainable international hospitality companies. It is this prestigious award that reinforces our commitment to environmental sustainability.

Langham's "Guest of the Earth" programme, allows our guests to take proactive steps towards protecting our environment.

CREATING SUSTAINABLE CONFERENCES

CONNECT Conferences offer a range of sustainable initiatives which are categorised by accommodation, cuisine and services. All variables are non-restrictive, so planners may select only those that are relevant to them.

CONNECT CONFERENCES ACCOMMODATION

Langham offers a number of options which alleviate the environmental impact from group accommodation. The following may be considered:

- Participation in the "Guest Of The Earth" programme, which promotes reusing linen where possible to reduce water and energy consumption.
- Opting to use fair-trade products as welcome amenities and for use in guestroom mini-bars.

In the past five years, our Langham hotels certified by EarthCheck have reduced their annual water consumption by 60,000 CuM.

CONNECT CONFERENCES CUISINE

When creating menus, a variety of cuisines and service options are available to help reduce the environmental impact, such as:

- Selecting locally-grown and seasonal products to reduce the carbon emissions caused by transportation.
- Requesting organic and vegetarian banquet menus, which minimises pollution and the use of natural resources.
- Opting for filtered water to reduce bottled wastage.

Some Langham hotels have installed an in-house bottled water plant, which re-uses Langham branded glass bottles to reduce plastic waste, and ultimately minimises the company's carbon footprint.

The Langham, Xintiandi, Shanghai's meeting space is cleverly designed to make the most of the natural light.

CONNECT CONFERENCES SERVICES

CONNECT Conferences offer a range of services to increase the sustainability of your event, including:

- The opportunity to incorporate tailor-made activities into a schedule, which give back to the local community;
- The availability of reusable items such as whiteboards, electronic signage, linen, dining ware and cutlery to minimise unnecessary waste;
- Waste management and recycling services are automatically implemented on site by Langham Staff. Planners can also opt to place recycling bins in meeting rooms to engage attendees and create awareness for sustainability through this waste management exercise;
- The opportunity to select energy efficient options, such as setting the air conditioner to a moderate temperature and maximising the use of natural light;
- An online Carbon Emission and Carbon Saving Calculator, enables planners to find out the real environmental cost of an event. Planners can then select sustainable offerings that offset this.

The annual energy consumption at our Langham hotels certified by EarthCheck is 1,000,000 kWh less than what we were consuming five years ago.

LANGHAM'S BEST PRACTICES WORLDWIDE

Energy Conservation

Maximising energy efficiency without affecting the quality of our service is a top priority for our hotels. Langham hotels have adopted various energy saving initiatives in guestrooms, lobbies, dining areas, meeting spaces and staff areas including:

- Retrofitting energy efficient lighting;
- Installing movement detectors for lighting in low traffic areas;
- Controlling outdoor lighting by photo-sensors;
- Optimising building energy use via building management systems;
- Installing heat recovery and cogeneration equipment;
- Maximising the use of natural lighting in hotel designs.

Water Conservation

Guestrooms, laundry services, watering landscaped areas, food preparation and dish washing are areas in our hotels which consume the majority of water.

Water saving initiatives include:

- Dual flush toilets;
- Water efficient shower fittings;
- Guest Of The Earth Programme (linen and towel reuse) at all hotels.

Waste Management

Primary waste sources in a hotel include general refuse from guestrooms, staff areas and food waste from kitchen and dining areas. Waste minimisation initiatives include:

- Replacing disposable paper mats, coasters, napkins, with reusable ones;
- Recycling paper, metal, plastics, cardboard, glass bottles, Styrofoam, cooking oil, printer cartridges and wine corks;
- Food and garden waste composting;
- Food donations;
- Donating used items (for example, furniture, fabric items and electronic equipment).

Responsible Procurement

We support procurement of materials and services in a sustainable manner.

Responsible Procurement initiatives include:

- Using 100% recycled paper for our marketing material;
- Using eco-friendly cleaning products replacing those traditional ones.
